PROFESSIONAL SUMMARY

Full Stack Developer with hands-on experience building and deploying full-stack web applications using MongoDB, Express.js, React.js, and Node.js. Skilled in RESTful API development, responsive frontend design, JWT-based authentication systems, and relational database management, with strong knowledge of JavaScript, Bootstrap, and modern web development practices.

EDUCATION

GC University, Lahore

Lahore

Bachelor (Honors) in Computer Science | Oct 2023 – Oct 2027

RELEVANT COURSEWORK

Object-Oriented Programming, Data Structures & Algorithms, Database Management Systems, Web Engineering, Operating Systems, Software Design & Architecture, Artificial Intelligence, Machine Learning

PROJECTS

Computer Science Society Portal | MERN Stack (MongoDB, Express, React, NodeJS)

- The CS Society had no central platform to manage and share events, announcements, team information, and student activities.
- Built a full-stack web portal using the MERN stack to give the society one place to manage and display all their content.
- Developed a responsive frontend with React.js and built 10+ RESTful API endpoints using Node.js and Express.js to handle all data operations.
- Used MongoDB to manage 4 dynamic content types (events, announcements, team members, student activities) and deployed the portal for live public access.
- Shipped a fully working portal serving 300+ society members, covering 4 full-stack layers (UI, API, database, deployment) and cutting content update time by ~60% compared to manual sharing methods.

Book Store Management System | MySQL

- A book store had no proper system to manage inventory, customer records, sales, and billing, leading to scattered and unreliable data.
- Designed and developed a full database management system to bring all store operations under one structured system.
- Built 8+ normalized tables with proper relationships to remove data duplication and ensure accurate, efficient data handling.
- Wrote optimized SQL queries for inventory tracking, billing, and sales - reducing query response time by ~40% through indexing and normalization.
- Produced a scalable database managing 4 core operations (inventory, customers, sales, billing), with 3NF normalization applied throughout to ensure long-term data integrity.

Bachelor's Admission System | OOP

- University admission processes were slow and error-prone with no automated tool to manage the full workflow.
- Designed and built a desktop application to handle the complete admission cycle from start to finish.
- Applied all four OOP pillars - Encapsulation, Abstraction, Inheritance, and Polymorphism - to build a clean, maintainable codebase with a user-friendly GUI.
- Implemented 3 core modules - form filling, merit score calculation, and merit list generation - covering the full admission pipeline.
- Delivered a fully working system that cut manual admission processing time by ~70%, handled data for 100+ student records, and reduced human error to near zero across the merit calculation process.

CERTIFICATIONS

Certificate in IT: Web Development

May 2025

Corvit Networks (Pvt) Ltd

AWS Cloud Foundations Trained

January 2025

Amazon Web Services

SKILLS

Programming Languages: C++, Python, JavaScript

Frontend Skills: HTML5, CSS3, JavaScript, ReactJS

Backend Skills: Node.js, Express.js, RESTful APIs, JWT Authentication

Databases: MongoDB, MySQL

Tools & Platforms: Git, GitHub, Figma, VS Code, Cursor, Claude, AWS
